

NITIN KANZARIYA

Software Engineer | Full Stack Developer

Ahmedabad, Gujarat | [+91 77788 77805](tel:+917778877805) | nkanzariya40@gmail.com | [LinkedIn](#) | [Github](#) | [Portfolio](#)

Results-driven Full Stack Developer with 2.5+ years of experience transforming business requirements into high-performance web applications. Specialized in building AI-integrated solutions, microservices architectures, and responsive interfaces using React.js, Next.js, Node.js, Python, and .NET. Successfully delivered 6+ production projects including intelligent chatbots, real-time dashboards, and enterprise management systems that improved operational efficiency and user engagement.

SKILLS

Front-End Development: React.js, Next.js 14, TypeScript, Angular, JavaScript (ES2023), Tailwind CSS, Material-UI, Redux, Zustand, Styled Components

Back-End Development: Node.js, Express.js, Python, FastAPI, RESTful APIs, BullMQ, Socket.IO, WebSockets

AI / ML: LangChain, LangGraph, RAG Pipelines, PageIndex, LLM Integration (OpenAI, Gemini, Ollama), Multi-LLM, Routing, Prompt Engineering

Databases: MongoDB, PostgreSQL, MySQL, Redis, SQL Server, Vector Databases

DevOps / Cloud: Docker, Git, GitHub Actions CI/CD

Testing: Jest, TypeScript strict mode

Other Skills: Microservices Architecture, RBAC, Stripe API, Microsoft Graph API, Webpack, Agile / Scrum

WORK EXPERIENCE

iTechOps – Ahmedabad, Gujarat - Full Stack Developer | Oct 2024 – Feb 2026

- Developing and maintaining **scalable web applications** using React.js, Next.js, Angular, Node.js, and Tailwind CSS.
- Building and integrating **Python Fast APIs, AI-driven solutions, and .NET APIs** to support diverse business needs.
- Collaborating with senior developers to implement new features and deliver **end-to-end full-stack solutions**.
- Participating in **code reviews, sprint planning, and Agile ceremonies** to ensure high-quality, timely delivery.
- Optimizing application performance and integrating **complex back-end systems** for seamless user experiences.

Sarola Infotech – Barvala, Gujarat - React Developer | June 2023 – July 2024

- Developed and maintained **web applications** using React.js, Next.js, and Tailwind CSS.
- Collaborated with back-end teams to integrate **RESTful APIs** and optimize data flow.
- Implemented **React Hooks** and **Material-UI** for dynamic UIs and efficient state management.
- Conducted **code reviews**, optimized performance, and resolved application bugs to ensure stability.

Sarola Infotech – Barvala, Gujarat - React Intern | Dec 2022 – May 2023

- Assisted in developing **front-end features** using React.js and Tailwind CSS.
 - Worked closely with senior developers on **feature implementation** and bug fixing.
 - Gained hands-on experience with **React Hooks** and **Material-UI**, improving front-end expertise.
 - Participated in **code reviews, team meetings**, and followed best practices in web development.
-

EDUCATION

Maharaja Krishnakumarsinhji Bhavnagar University – Botad, Gujarat

Master of Science in Information Technology (MSc IT)

PROJECTS

Aegis – Full Stack Developer | Next.js, React, Express.js, Python, FastAPI, MongoDB, Pinecone, Redis, Docker (In Progress)

- **Libraries:** LangChain, LangGraph, Socket.io, BullMQ, Stripe, Zustand, TanStack Query
- Designed and developed an AI-powered, **multi-tenant** customer support platform with RAG-based chatbot creation, real-time agent chat, and Stripe-powered SaaS billing.
- Built a dual-store document indexing pipeline — raw pages are chunked and stored as hierarchical tree structures in MongoDB (**Page Index**), while leaf-node embeddings are simultaneously indexed into **Pinecone** for vector search.
- Implemented an intelligent **LangGraph-based query routing** engine that classifies user queries, selects relevant documents via LLM reasoning, and traverses document trees to retrieve the most accurate context.
- Enabled **multi-LLM provider** support with dynamic model switching across **OpenAI, Anthropic, Google Gemini, Groq, and Ollama** based on tenant configuration and cost considerations.
- Engineered real-time chat functionality using Socket.io for live agent–customer conversation handoff with typing indicators and presence tracking.
- Developed asynchronous background workers using **BullMQ** and **ARQ** for document embedding, email delivery, and cross-store ingestion without blocking API responses.
- Implemented secure **multi-tenant authentication** with JWT + refresh tokens, SAML SSO, role-based access control, plan-based quota enforcement, and AES-256 encryption for tenant API keys.
- Integrated **Stripe for subscription billing** with checkout session creation, webhook-driven plan activation, and usage-based quota management.
- Designed a responsive Next.js admin dashboard with analytics charts, knowledge-base management, document upload (PDF, DOCX, web scraping), team invitations, and live conversation monitoring.
- Implemented semantic search with **hybrid retrieval** combining tree traversal and vector similarity, with LLM-powered re-ranking to reduce hallucinations and improve contextual relevance.
- Containerized all services with **Docker Compose** including health checks, resource limits, and inter-service networking for production-ready deployment.

Status Page ([Website](#)) – Full Stack Developer | .NET Core 6, Angular 14, SQL Server

- Designed and implemented a **real-time notification system** for transactional and event-driven alerts via email, SMS, and in-app push notifications.
- Built **REST APIs in C# and ASP.NET MVC** to manage notification templates and message delivery workflows.
- Integrated **SignalR and topic-based messaging** for instant updates and real-time communication.
- Configured **personalized notifications** based on user preferences and event triggers (e.g., order updates, promotions, security alerts).
- Connected with **SQL Server** to track notification states (sent, pending, failed) and ensure reliable logging and auditing.
- Developed an **admin dashboard** with retry mechanisms, delivery metrics, and analytics for system monitoring.
- Created a **Slack slash command integration** to update monitoring lists and record incidents directly from Slack.
- Implemented a **dynamic dashboard** with customizable charts and layouts for improved observability.
- Applied **role-based access control (RBAC)** to secure critical features and manage user/admin permissions.

- **Integrated a custom RAG (Retrieval-Augmented Generation) chatbot**, developed in **Python**, into the StatusPage as an **AI-powered assistant**:
 - Users can **query system documentation, monitoring history, and incident details** through natural language.
 - The chatbot provides **live outage status and real-time monitoring insights** by fetching current system data.
 - Acts as an **intelligent support companion** for both end-users and admins, improving system accessibility and troubleshooting efficiency

RAG ChatBot – Full Stack Developer | Next.js, Python, FastAPI, Vector Database, MongoDB

- **Libraries**: pytorch, langchain, numpy
- Designed and developed an advanced **Retrieval-Augmented Generation (RAG) chatbot** for intelligent question answering over structured and unstructured data.
- Implemented **LLM model switching**, enabling dynamic selection of language models based on use case, performance, and cost considerations.
- Built **user-specific vector stores** for personalized responses while maintaining a shared **global knowledge base** for common contextual retrieval.
- Integrated **document upload during live chat**, allowing real-time ingestion, embedding, and querying of PDFs and text files.
- Implemented **semantic search using vector databases** to retrieve the most relevant contextual information and improve response accuracy.
- Developed a scalable **FastAPI backend** to manage embeddings, retrieval pipelines, chat orchestration, and secure API communication.
- Designed a modern, responsive **Next.js frontend** with real-time chat updates and smooth user experience.
- Used **MongoDB** to store chat history, conversation metadata, user preferences, and document references.
- Built a **chat memory and session management system** to preserve conversational context across multiple interactions.
- Implemented **dynamic prompt customization**, allowing users to modify system prompts in real time to control tone, behavior, and response style of the LLM.
- Optimized **prompt engineering and retrieval pipelines** to reduce hallucinations and enhance contextual relevance.
- Delivered an **enterprise-ready AI assistant** capable of document intelligence, personal data recall, and contextual reasoning.

AI Media Generator – Full Stack Developer | Python, FastAPI, AI Models

- Developed an AI-powered media generation platform using **Python FastAPI** to automate content creation workflows.
- Implemented **Image-to-Video generation**, converting static images into short videos using AI-based frame interpolation and animation techniques.
- Built a **Script-to-Audio (Text-to-Speech)** module supporting natural-sounding voice synthesis for demo narration.
- Designed RESTful APIs with FastAPI to handle media processing, background tasks, and file streaming efficiently.
- Integrated asynchronous processing for long-running AI tasks to ensure smooth API performance.
- Enabled support for multiple input formats and configurable output parameters (voice type, duration, resolution).
- Focused on modular architecture for easy replacement or upgrade of AI models.
- Demonstrated end-to-end AI media pipeline suitable for marketing demos, educational content, and product previews.

MUFASA – Full Stack Developer | Angular, Dot Net 8, MySQL

- Developed and maintained a **full-stack application** with core modules for **stock and trading management**.
- Integrated **Microsoft Outlook** for seamless email communication and automated workflows.
- Implemented **dynamic email tagging** and advanced mailing features to improve communication efficiency.
- Designed and optimized **MySQL database schemas** for managing user data, stock records, and financial transactions.

- Built **responsive Angular front-end dashboards** to deliver real-time insights into stock and trading activities.
- Developed secure **DotNet backend services** to handle business logic, API integrations, and data synchronization.

Connection AI – *Front-End Developer | Next.js, Tailwind CSS*

- Developed a **responsive front-end application** for managing pharma-related chats and PDF documents.
 - Implemented functionality to **upload, read, and extract data from PDFs** for seamless data access.
 - Used **Redux Thunk** for state management and handling **asynchronous logic** in complex workflows.
 - Recreated and optimized the **UI with Tailwind CSS**, ensuring a clean and user-friendly design.
 - Integrated APIs with the front-end to support **chat features, document management, and real-time updates**.
-

ADDITIONAL DETAILS

- Strong understanding of full-stack application development lifecycle and deployment.
 - Proven ability to work collaboratively in a team environment, delivering quality software solutions on time.
 - Eager to leverage new technologies and frameworks to solve complex problems efficiently.
-

CERTIFICATES

- [Microsoft Certified: Fabric Data Engineer Associate](#)
